Patent No. 6093801
CENERAL INFORMATION:
APPLICANT: Scott, Randal W.
APPLICANT: Marra, Marian N.
TITLE OF INVENTION: GENETICALLY ENGINEERED BPI VARIANT
TITLE OF INVENTION: PROTEINS
NUMBER OF SEQUENCES: 27
CORRESPONDENCE ADDRESS:
ADDRESSEE: 285 Hamilton, Suite 200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IS Floppy disk

COMPUTER: IBM PC compatible

SOFTWARE: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/09/025,543

FILING DATE: Herewith

CLASSIFICATION:

NAME: Francis, Carol L.

REGISTRATION NUMBER: 36,513

REFERENCE/DOCKET NUMBER: 36,513

REFERENCE/DOCKET NUMBER: 06514/030005

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2, Application US/08013801

Patent No. 5420019

GENERAL INFORMATION:

APPLICANT: Theofan, Georgia
APPLICANT: Burke, David
APPLICANT: The OF INVENTION: Stable Bactericidal/Permeability-
TITLE OF INVENTION: Compositions Containing the Same
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

; Sequence 2, Application US/08013801
; Patent No. 5420019
; GENERAL INFORMATION:
APPLICANT: Theofan, Georgia
APPLICANT: Burke, David
APPLICANT: Baltaian, Manik
APPLICANT: Grinna, Lynn Stable Bactericidal/Permeability-
TITLE OF INVENTION: Increasing Protein Products and Pharmaceutical
TITLE OF INVENTION: Compositions Containing the Same
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
ADDRESSEE: Bicknell, O'Toole, Gerstein, Murray &

; Patent No. 5348942
; GENERAL INFORMATION:
    APPLICANT: Little Roger G. II
    APPLICANT: Parent, James Brian
    TITLE OF INVENTION: Bactericidal/Permeability-Increasing Protein Products
    TITLE OF SEQUENCES: 2
    CORRESPONDENCE ADDRESS:
    ADDRESSE: Marshall, O'Toole, Gerstein, Murray & Borun
    STREET: 6300 Sears Tower, 233 South Wacker Drive
    CITY: Chicago
    STATE: Illinois
    STATE: Illinois
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Patent No. 5576292

Patent No. 5576292

Patent No. 5576292

Patent No. 5576292

APPLICANT: Weiss, Jerrold

TITLE OF INVENTION: Biologically Active

TITLE OF INVENTION: Bactericidal/Permeability-increasing Protein Fragments

NUMBER OF SEQUENCES: 7

CORRESPONDENCE ADDRESS:

ADDRESSEE: Howard M. Frankfort

STREET: 805 Third Ave.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô
                                                            Sequence 69, Application US/08372783
Patent No. 5578572
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Lambert, Lewis H.
APPLICANT: Little, Roger G.
TITLE OF INVENTION: Anti-dram-Positive Bacterial Methods and TITLE OF INVENTION: Materials
NUMBER OF SEQUENCES: 237
CORRESPONDENCE ADDRESS:
ADDRESSEE: Material, O'Toole, Gerstein, Murray & Borun STREET: 6300 Sears Tower, 233 South Wacker Drive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             100.0%; Score 2507; DB 1; Length 487; 100.0%; Pred. Improved use of a bactericidal-permeability increasing protein - for neutralisation of heparin and treatment of endo-toxaemia, by admin. as covalently linked dimer of N-terminal fragment. WPI; 1995-319904/41.

Little RG;

Ammons WS,

Example 1; Page ?; 36pp; English.

ö Compositions of N-terminal fragments (i.e. amino acids 1-193 to 1-199) human bactericidal-permeability increasing (BPI) protein are used to neutralise heparin and to treat endotoxaemia. Efficacy of such compens is improved when they comprise at least 50% of the truncated rBPI in

```
dimeric form. The present sequence is that of rBPI(1-193) in which the first 4 amino acids of the BPI signal peptide are removed, the codon specifying the fifth amino acid of the signal sequence (Net at position - 27) is placed in the context of a consensus Kozak translation initiation sequence. This truncated rBPI is the preferred monomer for dimerisation in the presence of copper 2+ ions. N.B. The patent specification includes the known full-langth BPI sequence but does not contain sequences for any of the truncated versions of the protein. The present sequence has been obtained by modifying the wild-type sequence according to the description given by the inventors
                                                                                                                                                                                                                                                                                                                                                                             DSFKIKHLIGKGHYSFYSMDIREFQLPSSQISMVPNVGLKFSISNANIKISGKWKAQKRFL 125

The present sequence is the recombinant endotoxin neutralising
polypeptide (RENP) B(1-190) (Lot #15969), which comprises residues 1-190
cf human bactericidal/permeability increasing protein (NBPI). The RENP,
which selectively and specifically binds lipopolysaccharide (LPS) and has
endotoxin neutralising activity, can be used to detect a site of Gram
endotoxin neutralising activity, and prevent or treat endotoxin related
clisorders, preferably where LPS mediated stimulation of neutrophils and
monouclear cells is inhibited, e.g. shock, disseminated intravascular
coagulation, anaemia, thrombocytopaenia, adult respiratory distress
syndrome, renal failure, liver disease and conditions associated with
Gram negative bacterial infection. The RENP has an enhanced serum half
life relative to naturally occurring BPI, and binds LPS without
criggering a significant, undesirable immune response. N.B. Sequence not
given in figure 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                   The present sequence is the recombinant endotoxin neutralising polypeptide (RENP) B(1-199) (NCY108), which comprises residues 1-199 of human bactericidal/permeability increasing protein (hBPI). The RENP, which selectively and specifically binds lipopolysaccharide (LPS) and has endotoxin neutralising activity, can be used to detect a site of Gram negative bacterial infection, and prevent or treat endotoxin related clisorders, preferably where LPS mediated stimulation of neutrophils and monounclear cells is inhibited, e.g. shock, disseminated intravascular coagulation, anaemia, thrombocytopaenia, adult respiratory distress coagulation, anaemia, thrombocytopaenia, adult respiratory distress cyndrome, renal failure, liver disease and conditions associated with Gram negative bacterial infection. The RENP has an enhanced serum half it relative to naturally occurring BPI, and binds LPS without given in specification, but produced using the wild type hBPI sequence not given in figure 3

This is a recombinant bactericidal/permeability-increasing (BPI) protein product ran be administered especially by contacting with blood to delay or prevent clot formation in the blood or contacting with blood to delay or prevent clot formation in the blood or to enhance clot dissolution in the blood. A BPI protein product can also be administered, optionally with a thrombolytic agent (TA), to treat a patient suffering from thrombotic disorders such as arterial thrombosis, etroke, intracardiac thrombosis, peripheral artery thrombosis associated with exposure of blood to a foreign or injured thrombosis associated with exposure of blood to a foreign or injured tissue surface, hypercoagulability, non-endotoxin-associated intravascular coagulopathy: The BPI protein products can be used in a method for enhancing reperfusion or reducing reocclusion in a subject treated with a comprising co-administration of the BPI protein product and the TA and reperfusion or to reducing reocclusion in a subject treated with a reperfusion or to reduce reocclusion in a subject to establish reperfusion of a BPI protein product and TA, the dosage of the TA being less than that required for a desired pharmaceutical effect when the TA is administered as a monotherapy. The BPI protein product shave comprising candinistered as a monotherapy. The BPI protein product and thrombolytic activity and can be used for the TA entited and thrombolytic activity and can be used for the product can the capacity of products can be used for reduce the dosage of antichrombotic agent canticoagulant and thrombolytic activity and can be used for the capacity or eliminating potential side effects. Note: This sequence is not provided in the specification. It has been created connectivity and capacity or eliminating potential side effects. Note: The property and provided in the specification. It has been created benefit energing and the specification in sequence given in Pages 46-48 of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DSFKIKHLGKGHYSFYSMDIREFQLPSSQISMVPNVGLKFSISNANIKISGKWKAQKRFL 120

The BPIP binds lipopolysaccharides and inhibite the immunostimulatory and toxic activities of LDS in vitro and in vivo. The lipid copmpsn. stably maintains the BPIP in a sol. active form. The compsn. can be used for chetecting or quantifying LDS in a sample, coating a surgical tool, coating an implantable invasive device, decontaminating a fluid conty. LPC and treating endotoxin related -shock, -disseminated intravascular coagulation, -anaemia, -thrombocytopenia, -adult respiratory stress syndrome or -renal failure, or for preventing endotoxaemia. The present sequence is the recombinant endotoxin neutralising polypeptide (RENP) B(1-212) (Lot #159693), which comprises residues 1-212 of human bactericidal/permeability increasing protein (HBPI). The RENP, which selectively and specifically binds lipopolysaccharide (LPS) and has endotoxin neutralising activity, can be used to detect a site of Gram negative bacterial infection, and prevent or treat endotoxin related disorders, preferably where LPS mediated stimulation of neutrophils and mononuclear cells is inhibited e.g. shock, disseminated intravagular coagulation, anaemia, thrombocytopaenia, adult respiratory distress syndrome, renal failure, liver disease and conditions associated with Gram negative bacterial infection. The RENP has an enhanced serum half life relative to naturally occurring BPI, and binds LPS without triggering a significant, undesirable immune response. N.B. Sequence not given in specification, but produced using the wild type hBPI sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Lipo:polysaccharide binding and endotoxin neutralising polypeptide - useful in diagnosis, prevention and treatment of Gram-negative bacterial infection and associated disorders and conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                     Recombinant; endotoxin; neutralisation; RENP; Lot #159693; lipopolysacharide; LBS; bacteritcidal; permeablilty; increase; BPI; detection; Gram-negative; bacterium; infection; prevention; treatment; disorder; mediation; etimulation; neutrophil; mononuclear cell;

```
of human bactericidal/permeability increasing protein (hBPI). The RENP, which selectively and specifically binds lipopolysaccharide (LPS) and has endotoxin neutralising activity, can be used to detect a site of Gram negative bacterial infection, and prevent or treat endotoxin related disorders, preferably where LPS mediated stimulation of neutrophils and mononuclear cells is inhibited, e.g. shock, disseminated intravascular coagulation, anaemia, thrombocytopaemia, adult respiratory distress syndrome, renal failure, liver disease and conditions associated with Gram negative bacterial infection. The RENP has an enhanced serum half life relative to naturally occurring BPI, and binds LPS without triggering a significant, undesirable immune response. N.B. Sequence not given in specification, but produced using the wild type hBPI sequence given in figure 3
                                                                                                                                                                                                                                                                                                                                     DSFKIKHLGKGHYSFYSMDIREFQLPSSQISMVPNVGLKFSISNANIKISGKWKAQKRFL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                      Pseudomonas species; (b) with endotoxin neutralising activity; (c) with both endotoxin neutralising activity and bactericidal activity for betweenomes aeruginosa; (d) a hybrid peptide with endotoxin neutralising activity for activity and bactericidal activity, the peptide with endotoxin neutralising activity combined with at least 1 different amino acid sequence of a peptide that has bactericidal activity; and (e) a prosthetic device which has a sufficient amount of BP attached to the surface to inhibit bacterial growth. The peptides of the invention are used in treating bacterial infection such as Pseudomonas strains e.g. for P. aeruginosa at 10-7 to 10-9 M, and Escherichia coli. The peptides are also used to treat endotoxin shock. The present sequence represents bactericidal permeability increasing factor from an example of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DSFKIKHLGKGHYSFYSMDIREFQLPSSQISMVPNVGLKFSISNANIKISGKWKAQKRFL 129

                                                                                                           The BPI binds endotoxin in the presence of serum and plasma and, unlike other known endotoxin binding proteins such as LBP (lipopolysaccharide binding protein), BPI inhibits the immunostimulatory and toxic activities of endotoxin both in vitro and in vivo. Thus BPI can be used in the diagnosis and therapeutic and prophylactic treatment of endotoxin-related disorders including endotoxemia and endotoxic shock
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -

sequences are useful for the treatment of neurological disorders such as central nervous system (CNS) disorders, CNS-related disorders, focal brain disorders, global-diffuse cerebral disorders and other neurological and cerebrovascular disorders. The CNS disorders include Alzheimer's disease, senile dementia, Huntington's disease, amyotrophic lateral sclerosis, Parkinson's, Gilles de la Tourette's syndrome, autonomic function disorders such as hypertension and sleep disorders, neuropsychiatric disorders, psychoactive substance use disorders, anxiety, and bipolar affective disorder. The present sequence is a sequence used in a sequence homology alignment with the TANGO/INTERCEPT
                                                                                                                                                                                                                                                                                                                                                                                                                                   180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                The invention relates to secreted polypeptide-related proteins and nucleic acids (TANGO and INTERCEPT proteins and nucleic acids). The nucleic acids (TANGO and INTERCEPT proteins and nucleic acids). The cucleic acids, proteins and antibodies specific to the proteins are useful in screening assays, predictive medicine (e.g. diagnostic assays, prognostic and therapeutic methods. The sequences are used in diagnostic, and therapeutic methods. The sequences are used in diagnostic, prophylactic and therapeutic methods. The sequences are used in diagnostic, preventing or treating proliferative disorders (e.g. multiple soleroais or lupus), neurological disorders (e.g. Alzheimer's disease or Parkinson's disease), neurological disorders (e.g. Alzheimer's disease or Parkinson's disease), cardiovascular disorders (e.g. Alzheimer's disease or Parkinson's disease), cardiovascular disorders (e.g. thrombocytopenia or ansemia) and disorders platelet disorders (e.g. thrombocytopenia or ansemia) and disorders cids may also be used in chromosome mapping, tissue typing and forensic biology, and as surrogate markers. This sequence represents a secreted colypeptide-related protein of the invention. Note: The sequence data for this patent was obtained in electronic format directly from USPTO at equance can be considered.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

the invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide. The purified holypeptide, or the antibody that binds to this polypeptide. The purified nolypeptide is also useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and purifieds are particularly useful for treating or preventing myeloms, colon cancer, gastric cancer, adenocarcinoms, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed profiling, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             free invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic composition for eliciting in a mammal an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I MHC-binding polypeptide. The polypeptides and polymuleotides are particularly useful for treating or preventing myeloma, colon cancer, agentic cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an translational profiling. Note: This sequence does not appear in the printed profilication but was obtained in electronic format directly from WIPO at

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Ilpopolysaccharide-binding protein - human
N;Alternace names: LBP; LRS-binding protein
C;Species: Homo sapiens (man)
C;Decies: 11-Oct-1994 #sequence_revision 18-Nov-1994 #text_change 09-Jul-2004
C;Accession: A$4136
C;Accession: A$4136
R;Wilde, C.G.; Sailhamer, J.J.; McGrogan, M.; Ashton, N.; Snable, J.L.; Lane, J.C.; Leon J. Biol. Chem. 269, 17411-17416, 1994
A;Title: Bacterididal/permeability-increasing protein and lipopolysaccharide (LPS)-bindi
A;Reference number: A$4136; MUID:94292492; PMID:7517398
A;Accession: A$4136
A;Residues: Preliminary; not compared with conceptual translation
A;Molecule type: nucleic acid
A;Residues: 1-481 <a href="https://wit.backbone">with conceptual translation</a>
A;Rolecule type: nucleic acid
A;Residues: 1-481 <a href="https://wit.backbone">with conceptual translation</a>
